## Children: Not established. fluticasone Arnuity 100mcg, Ellipta 200mcg pwd Adults: Base initial dose on previous asthma therapy and disease severity. furoate Not on inhaled corticosteroid: usually initiate at 100mcg once daily; may increase to 200mcg once daily if inadequate response after 2 weeks. Max 200mcg/day.

<12yrs: Not established.

Both: Max 232mcg twice daily.

<4yrs: Not recommended.

max 1000mcg twice daily.

4-11yrs: max 88mcg twice daily.

440mcg twice daily; max 880mcg twice daily.

4-11yrs: 110mcg once in PM; max 110mcg/day.

6—<12yrs: 2 inh of 80/4.5 twice daily (AM & PM).</p>

Children: ≤17yrs: Not established.

4-11vrs: 1 inh of 100/50 twice daily.

MDI <4yrs: Not established.

<12yrs: Not established.

<12yrs: Not established.

Key: dry pwd = dry powder for inhalation; EIB = exercise induced bronchospasm; MDI = metered-dose inhaler; MDA = metered dose aerosol;

Max 1 inh of 232/14mcg twice daily.

≥12yrs: Previously on inhaled steroids: Initially 1 inh of 55mcg, 113mcg,

or 232mcg twice daily (approx. 12hrs apart) based on asthma severity and

previous steroid dose. Not on inhaled steroid: Initially 55mcg twice daily.

4-11yrs: Previously on bronchodilators alone or on inhaled corticosteroids:

≥11yrs: Previously on bronchodilators alone: Initially 100mcg twice daily; max 500mcg twice daily. Previously on inhaled corticosteroids: initially 100-250mcg twice daily; max 500mcg twice daily. Previously on oral corticosteroids (wean gradually): initially 500-1000mcg twice daily;

≥12yrs: Previously on bronchodilators alone: Initially 88mcg twice daily; max 440mcg twice daily. Previously on inhaled steroids: Initially 88-220mcg twice daily; max 440mcg twice daily. Previously on oral steroids: Initially

Adults: Previously on inhaled medium-dose corticosteroids: use 100mcg strength. Previously on inhaled high-dose or oral corticosteroids (wean gradually): use 200mcg strength. For both: 2 inh twice daily (AM & PM).

≥12yrs: Previously on bronchodilators alone or inhaled steroids: Initially 220mcg once in PM; max 440mcg/day (as 2 inh once daily or 1 inh twice daily). Previously on oral steroids: Initially 440mcg twice daily; max 880mcg/day.

≥12yrs: Base initial dose on asthma severity. 2 inh of 80/4.5 or 160/4.5

Adults: Initially 1 inh of 100/25mcg or 200/25mcg once daily, based on disease

severity and previous asthma therapy. Max 1 inh of 200/25mcg once daily.

≥12vrs: Initially 1 inh of 100/50, 250/50 or 500/50 twice daily, based on disease severity and previous asthma therapy; if insufficient response after 2wks, use next higher strength. Max 1 inh of 500/50 twice daily.

≥12yrs: Initially 2 inh of 45/21, 115/21 or 230/21 twice daily, based on

≥12yrs: Not previously on ICS: initially 1 inh of 55/14mcg twice daily.

≥12yrs: Initially 2 inh of 100mcg/5mcg or 200mcg/5mcg twice daily

(AM & PM), based on disease severity and previous asthma therapy. Max 2 inh of 200mcg/5mcg twice daily (max 800mcg/20mcg per day).

Switching from an ICS or combination product: 1 inh of 55/14mcg,

disease severity and previous asthma therapy; if insufficient response after 2wks, use next higher strength. Max 2 inh of 230/21 twice daily.

113/14mcg or 232/14mcg twice daily, based on disease severity and previous asthma therapy. If insufficient response after 2wks, use next higher strength.

(Rev. 2/2018)

twice daily (AM & PM). If insufficient response after 1-2wks of 80/4.5 strength, may switch to 160/4.5 strength. Max 2 inh of 160/4.5 twice daily.

Initially 50mcg twice daily; max 100mcg twice daily.
